

SEO Technical Audit Report

https://www.mazwiturnkey.co.za/
Crawl date: 12 August 2026 | Crawler: Screaming Frog SEO Spider

Executive Summary

This report summarises a technical SEO crawl of mazwiturnkey.co.za. The crawl covered 5 indexable HTML pages and 113 images, alongside associated JavaScript and CSS resources. The site returned no broken links, no server errors, and no redirect chains, which is a healthy technical foundation. However, the audit surfaces two categories that need attention: on-page SEO fundamentals (missing meta descriptions and H1 tags across most pages) and HTTP security headers (five headers are missing site-wide). Image optimisation is also an opportunity area. Twenty issues were identified in total: 2 flagged as Issues, 11 as Warnings, and 7 as Opportunities, with no Critical or High priority items.

148	104	5	20
URLs Encountered	Internal URLs	Indexable Pages	Issues Flagged

Crawl Overview

Metric	Value
Total URLs encountered	148 (100%)
Total URLs crawled	137 (92.6%)
Internal URLs	104 (70.3%)
External URLs	44 (29.7%)
Internal indexable URLs	104 (100% of internal)
HTTPS coverage	104 / 104 (100%) — no HTTP or mixed content found
Response codes	126 successful (2xx), 11 redirects (3xx), 0 client/server errors
Images crawled	113 total (93 internal, 20 external)
Max crawl depth	1 click from the homepage for all pages

Issues Summary

All issues found during the crawl, ranked by priority. 'Issue' items have the most direct SEO impact, 'Warning' items should be reviewed, and 'Opportunity' items are optimisation suggestions.

Issue	Type	Priority	URLs
H1: Multiple	Warning	Medium	1
Content: Low Content Pages	Opportunity	Medium	3
Images: Over 100 kB	Opportunity	Medium	43

Issue	Type	Priority	URLs
H1: Missing	Issue	Medium	3
Security: Missing X-Frame-Options Header	Warning	Low	104
Links: Non-Descriptive Anchor Text In Internal Outlinks	Opportunity	Low	2
Security: Missing HSTS Header	Warning	Low	104
H2: Missing	Warning	Low	1
Links: Internal Nofollow Outlinks	Warning	Low	4
H1: Non-Sequential	Warning	Low	1
H2: Multiple	Warning	Low	4
Security: Missing Secure Referrer-Policy Header	Warning	Low	104
H2: Duplicate	Opportunity	Low	3
Security: Missing Content-Security-Policy Header	Warning	Low	104
Images: Missing Size Attributes	Opportunity	Low	70
Images: Missing Alt Text	Issue	Low	20
Security: Bad Content Type	Warning	Low	2
Security: Missing X-Content-Type-Options Header	Warning	Low	104
Meta Description: Missing	Opportunity	Low	5
Content: Readability Difficult	Opportunity	Low	3

Detailed Findings

1. Meta Descriptions Missing

Affects 5 of 5 pages (100%)

Every indexable page on the site is missing a meta description. This is a missed opportunity to control how the page appears in search results and to influence click-through rate, since Google will otherwise auto-generate a snippet from page content.

Recommended fix: Write a unique, descriptive 120-155 character meta description for each of the 5 pages (home, about, services, gallery, contact), summarising the page's purpose and including a natural call to action.

2. H1 Headings Missing or Duplicated

Missing on 3 of 5 pages (60%); 1 page has multiple H1s; 1 page has a non-sequential H1

The H1 tag is one of the stronger on-page ranking signals and helps both users and search engines understand a page's main topic. Three pages currently have no H1 at all, one page has more than one H1, and one page's H1 doesn't appear first in the heading structure.

Recommended fix: Add a single, descriptive H1 to each page that states its main topic, and make sure it is the first heading in the document. Reserve H2-H6 for subsections.

3. H2 Structure Issues

Missing on 1 page (20%); duplicated on 3 pages (60%); multiple H2s on 4 pages (80%)

H2s act as signposts for major sections of a page. Duplicate H2 text across pages makes it harder for users and search engines to distinguish one page from another.

Recommended fix: Review H2 usage on each page so that headings are unique, descriptive, and follow a logical hierarchical structure (H2 before H3, etc.).

4. HTTP Security Headers Missing Site-Wide

104 of 104 URLs (100%) missing HSTS, CSP, X-Frame-Options, X-Content-Type-Options, and a secure Referrer-Policy header

None of the crawled URLs return the five recommended security response headers. This doesn't directly affect rankings, but it does leave the site more exposed to clickjacking, MIME-sniffing, and referrer-leakage risks, and can be flagged by browser security audits.

Recommended fix: Configure the web server (or CDN) to send: Strict-Transport-Security, Content-Security-Policy, X-Content-Type-Options: nosniff, X-Frame-Options: SAMEORIGIN (or DENY), and a Referrer-Policy of strict-origin-when-cross-origin, across all responses.

5. Image Optimisation

43 of 113 images (38%) over 100kB; 70 of 113 images (62%) missing width/height attributes; 20 of 113 images (18%) missing alt text

Large, unoptimised images slow page load, and images without explicit width/height attributes are a leading cause of layout shift (poor Cumulative Layout Shift). Missing alt text also reduces accessibility and denies search engines context about image content.

Recommended fix: Compress and appropriately size the 43 oversized images, add explicit width/height (or aspect-ratio CSS) to all images, and add descriptive alt text to the 20 images currently missing it (use alt="" only for purely decorative images).

6. Low Content & Readability

3 of 5 pages (60%) below the 200-word content threshold; 3 of 5 pages (60%) scored 'difficult' for readability

Thin content can make it harder for search engines to understand a page's purpose, and difficult copy (per the Flesch reading-ease score) can hurt user engagement. This is a directional signal rather than a hard rule — some page types naturally run shorter.

Recommended fix: Expand key service/about pages with more descriptive, benefit-focused copy, and simplify sentence structure and word choice where content reads as complex.

7. Internal Linking

4 pages (80%) use nofollow on internal links; 2 pages (40%) contain non-descriptive anchor text

Nofollow on internal links prevents PageRank and crawl signals from flowing to the linked pages unless they're reachable another way. Non-descriptive anchors ('click here', 'learn more') give users and search engines little context about the destination page.

Recommended fix: Remove nofollow from internal links unless there's a specific reason to discourage crawling, and replace generic anchor text with descriptive phrases that reflect the destination page's topic.

Priority Action Plan

Priority	Action	Pages/URLs Affected
Medium	Add unique H1 to every page; fix multiple/non-sequential H1s	4 of 5 pages
Medium	Expand thin-content pages and simplify copy for readability	3 of 5 pages
Medium	Compress and resize the 43 images over 100kB	43 images
Low	Write unique meta descriptions for all 5 pages	5 of 5 pages
Low	Add width/height attributes to images	70 images
Low	Add alt text to images missing it	20 images
Low	Configure HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy headers (site config)	All URLs
Low	Fix duplicate/multiple H2s and non-descriptive anchor text	Various pages

Appendix: Indexable Pages & Titles

URL	Title	Length
/	Home - Mazwi Turnkey Entreprises	32
/contact-us/	Contact - Mazwi Turnkey Entreprises	35
/about/	About - Mazwi Turnkey Entreprises	33
/services/	Services - Mazwi Turnkey Entreprises	36
/gallery/	Gallery - Mazwi Turnkey Entreprises	35

Report generated from a Screaming Frog SEO Spider crawl. Priority levels (Low/Medium/High) reflect the crawler's default assessment; business context may shift real-world priority.
